Introducing the Spectrum CSC Series ENT Treatment Cabinet

Concealed Safe Controls.....CSC

With the NEW superior low voltage design and modern style, the Spectrum CSC treatment cabinets offer you the ultimate in selection of features and accessories to accommodate each office's concerns. **API's** CSC system puts convenient controls in sealed membrane switches, and adds a concealed power switch deterring the curious patients from operating the cabinet. It can even power-off exam chairs, microscopes and other equipment if you wish. Besides concealed and safe controls, the other features and options are at your fingertips, all with the durability everyone associates with **API** treatment cabinets.

Classic Design.....Modern Functions.....Built to Last

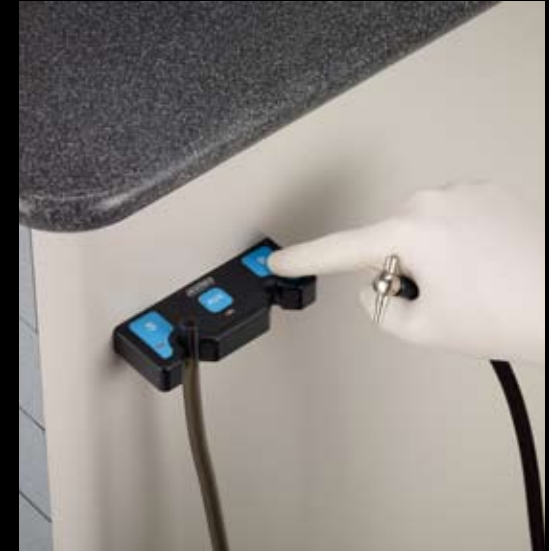

API's Spectrum CSC Treatment Cabinet is designed and engineered with your daily routine in mind. From our innovative, stylish design to our ultra-modern low voltage control system, the Spectrum workstations will continue to provide reliable service for many years to come.

Stylish, rounded corners highlight the cabinet's walls with a thickness of over 1 inch. The neutral base color along with our optional drawer front accent colors will blend in with any decor. This cabinet's strength and durability is unsurpassed.

The CSC Control Box offers you more peace of mind when you are out of the room by locating it on the rear of the accessory riser. The master power switch is concealed from curious patients who may be interested in operating the cabinet while you are away.

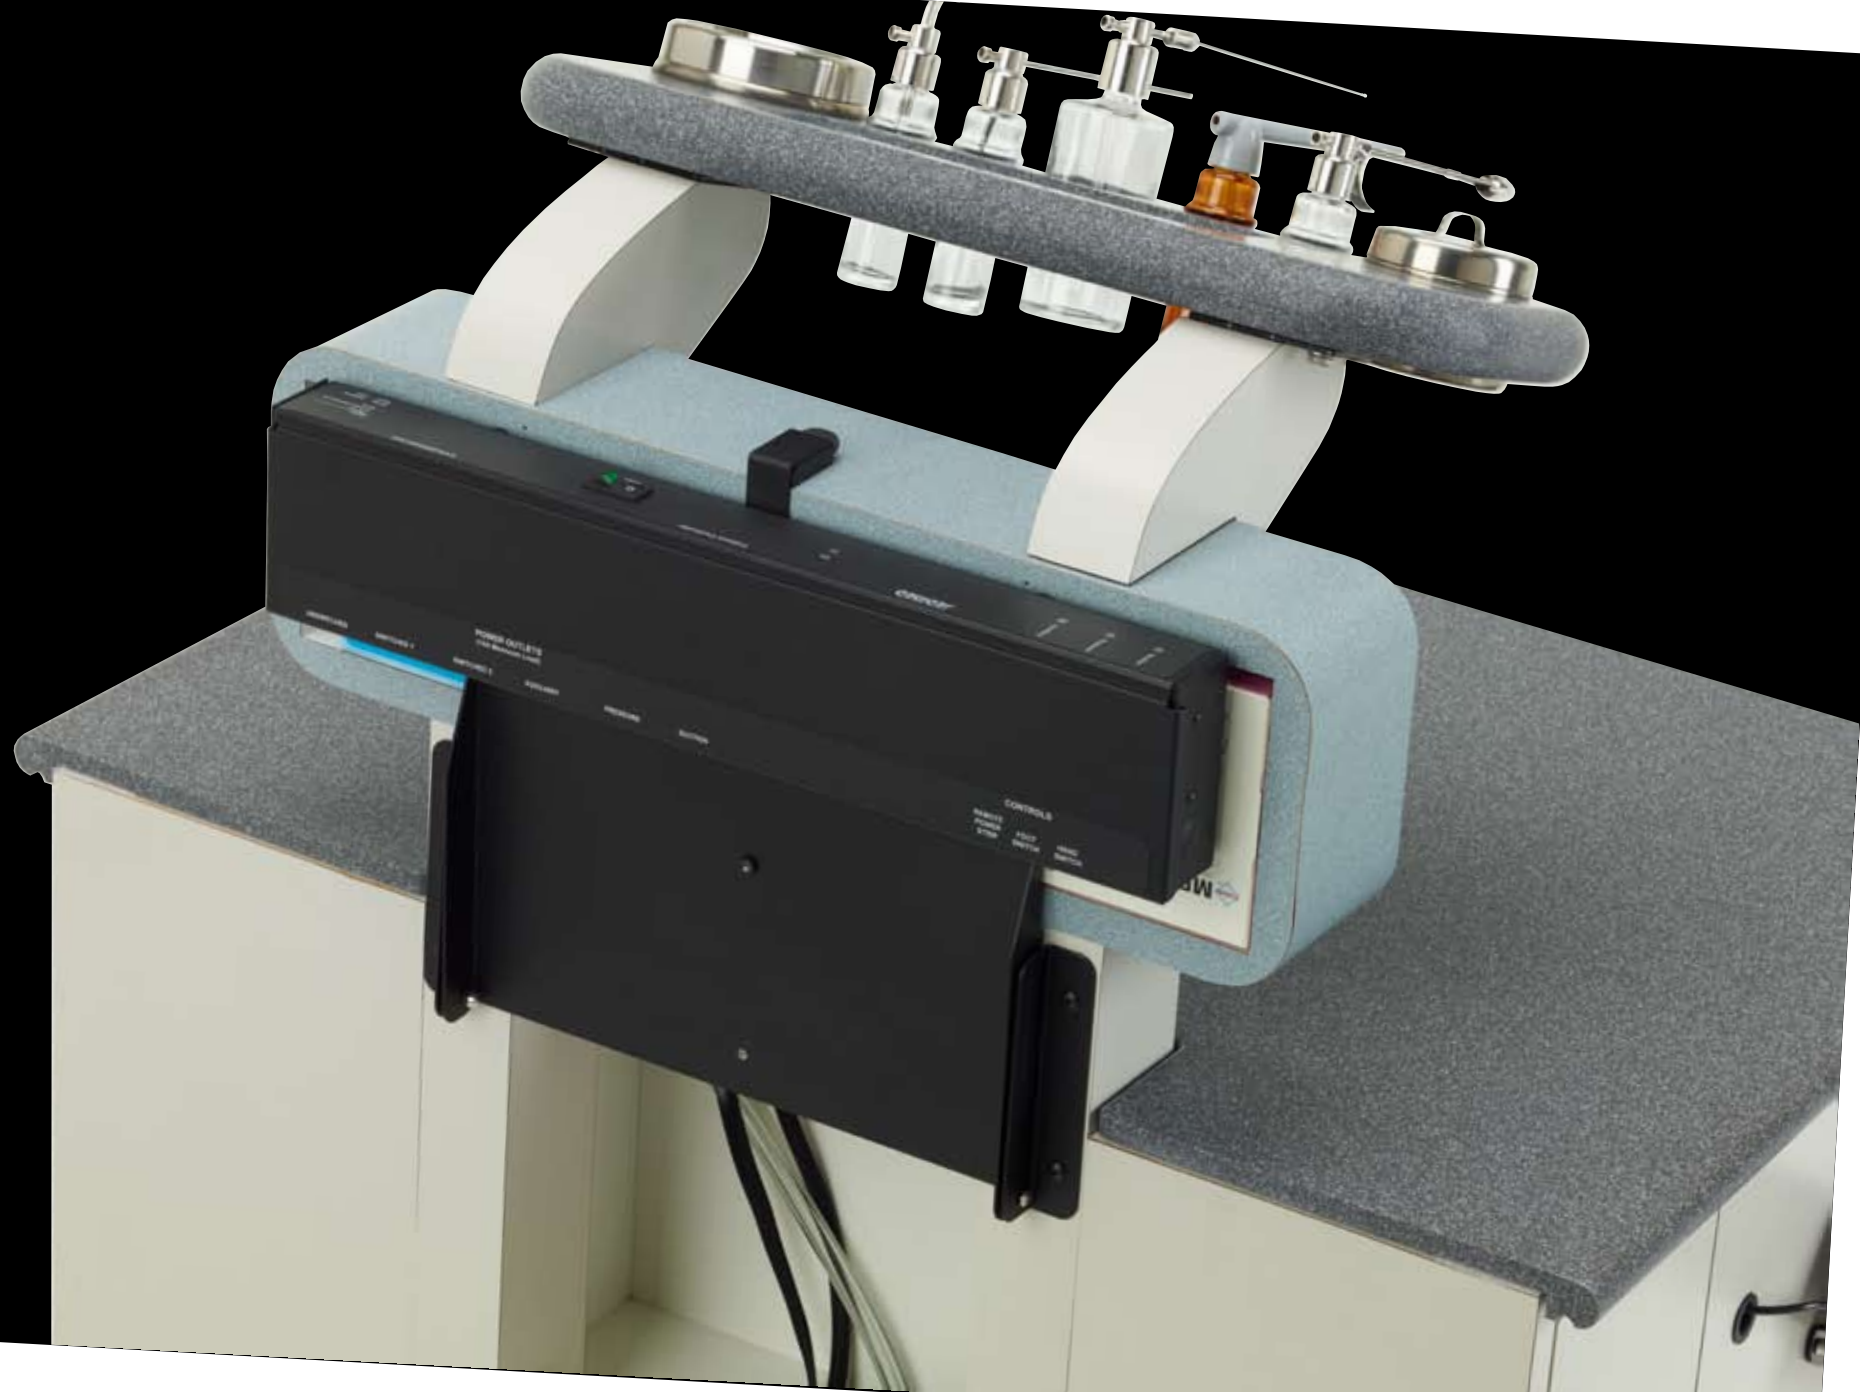

Cabinet operations are controlled via a safe and reliable low voltage control system. Whether it is the standard, conveniently located suction/pressure switch or the optional footswitch control, you can feel confident in the cabinet's operations each time you turn it on.

Unsurpassed Quality

Ergonomic Design

The CSC Advantage

For years, doctors and nurses have been looking for solutions to “child proof” their exam rooms, especially when they are out of the room. The difficulty has always been hiding the operating switches but still keeping them convenient. **The** engineering team has now developed a system that meets these demands. The CSC Control Box keeps the master power switch concealed from curious patients but is still conveniently located for both doctors and nurses using the treatment cabinet. In addition to controlling the treatment cabinet’s main power, the CSC Control Box can control the main power to your chair and microscope by utilizing the optional remote power module.

**Keep your exam room safe
with just one switch.**

41"

**Safety for You.....
Your Staff.....
Your Patients**

Built-In Safety.....

Safety is an integral part in the design of the Spectrum CSC Treatment Cabinet. In conjunction with the concealed master Power Switch, **API** has implemented many other exclusive safety features to keep you, your staff, and your patients as safe as possible during an examination. In addition many of these safety features are engineered to make the cabinet more user friendly. This unique approach to treatment cabinet design has created a system that is not only safe and secure but is convenient and easy-to-operate.

Raised bottle shelves* keep items out of reach of young hands and the open shelf bottom allows for easy cleaning.

The solid work surface provides extra work space and is preferred by OSHA for easy clean-up of spills and contaminations.

The extra thickness of **the** Corian® work surface is both visually appealing and rugged. It will provide years of service.

**not available on Spectrum low back model*

The Spectrum CSC Treatment Cabinets' pressure and suction control switch is uniquely designed to provide both safety and convenience. This low voltage 12 volt membrane switch is inconspicuous and easy to access. In addition, these sealed switches can be wiped down with a damp cloth which can help reduce the incidence of cross-contamination.

Our disposable trap canister system with smoked suction hose is easy to access on the slide system. The tube opening in the cabinet wall is large enough for safe removal of the contaminated tubing. A safety cap is provided. Each canister has a safety filter and a back-up filter which gives secondary protection for the suction pump. The smoked tubing obscures the patient's view of biomatter and the thick tubing prevents collapse under suction.

Durability.....Guaranteed

The Spectrum CSC Treatment Cabinet blends and utilizes the highest quality components with modern manufacturing techniques. Our 3+ decades of experience have given us the ability to design and build treatment cabinets that require very little maintenance, and with reasonable care will provide many years of trouble free service. You can rest assured that when you purchase any of the Classic CSC Treatment Cabinets you will be purchasing a system that is designed and built for the long haul.

All materials used in the manufacturing of a Spectrum CSC Treatment Cabinet must meet the highest quality standards. Just one glance at the over 1" thick supporting walls, the all steel bracing hardware, or the black nickel drawer pulls, and you know this treatment cabinet is built for longevity.

Extremely durable, adjustable drawer hardware fastens heavy-duty drawer fronts to all-steel drawers. These features provide you with extended life and smooth action for years. Also, drawer front colors can be changed to match new color schemes in future office décors.

Each treatment cabinet houses two separate heavy-duty pumps for both suction and pressure. These are top of the line pumps with industrial ratings for durability and power. Each is equipped with safety filters for added protection and longevity.

Both pumps are guaranteed for 10 years.

**Designed to Stand
The Test of Time**

The Spectrum CSC Treatment Cabinet is designed to offer storage and space for all of your basic exam room needs. Each Spectrum offers 4 large instrument drawers and 1 deep storage drawer. The standard raised bottle shelf* frees up more space by keeping the bottles off the work surface. Many of our optional equipment accessories have been specially designed to mount to the cabinet instead of building them into the cabinet and losing storage space. Carefully engineered to utilize space in a revolutionary way, the Spectrum CSC Treatment Cabinet is in a class of its own.

**not available on Spectrum low back model*

Spectrum CSC Models

The Spectrum CSC treatment cabinet is available in two models; low and standard. The standard Spectrum CSC cabinet offers you the ultimate in selection of features, storage capabilities, and accessories. The Spectrum low model offers many of the same features and storage capabilities, but is designed to accommodate offices that have concerns for space and economy. 220V models are available upon request.
