

# HOCL

## Super Oxidizing Saline

Hypochlorous acid (HOCL) is a naturally occurring, oxidant that is produced by white blood cells within the human body; it acts as the main ingredient used by our immune systems (phagocytes) to destroy disease-forming pathogens. It is:

- 100% Natural
- Non-toxic
- Non hazardous
- Non corrosive
- Anti-bacterial
- Anti-fungal
- Anti-viral
- Sporicidal
  
- Hypoallergenic

AND:

- Triggers a cascade of antimicrobial effects that are good for the skin, unlike alcohol or bleach products
- Clots blood (clot stabilization)
- Reduces swelling
- Stimulates epithelial growth

Several published studies show HOCL is an effective solution in support of gingivitis, periodontal disease, implants, and post-surgical inflammation.

### Harness the Power of Your Natural Immune Response

*Alcohol Free • Sulfate Free • Triclosan Free  
pH Balanced • No Residual Staining*

HIGHLY EFFECTIVE

LABORATORY TESTED

BREAKTHROUGH PURITY

SAFE & NON-TOXIC

# Super Oxidizing Saline

## HOCL is safe for users:

- No health or safety risks
- No protective gear required
- No eye or skin irritation
- No exposure limits

## HOCL is safe for the environment:

- No disposal requirements
- Reduces water usage
- Reduces waste water discharge
- No adaptive resistance change for micro organisms
- No environmental impact
- Fully biodegradable
- Satisfies the demand for implementing safer and more natural food products

The only elements required to create Super Oxidized Saline/HOCL are water, salt and electricity, and are all safe and environmentally friendly

The microbicidal activity of a new disinfectant, "superoxidized water," has been examined.

The concept of electrolyzing saline to create a disinfectant or antiseptics is appealing because the basic materials of saline and electricity are inexpensive and the end product (i.e., water) does not damage the environment.
